

The Future of Indonesia's Digital Infrastructure

TOWR.JK x WIFI.JK

FFIC Acquisition Proposal

Proposed by: Odyssey Capital

Darell MT

Mishell L

Gloria CK

TOWR must transform a stagnant pure-play tower operator into an **intergrated digital infrastructure platform** by acquiring **WIFI** to capture high-margin **FTTH** growth.

Background and Strategic Transformation

TOWR - Passive Tower Growth

WIFI - Digital Infrastructure Growth

Deal Stucture (51% Acquisition)

Synergy & Net Value Creation

Return Analysis (Financial Impact)

The largest structural MNO industry transformation in a decade is forcing industry value to shift toward FTTH infrastructure.

The number of mobile operators collapsed from 5 to 3 nationwide players (Telkomsel, IOH, XLSmart) by 2025.

The XL and Smartfren merger in April 2025 was the biggest telco M&A in Southeast Asia. The influence towards TOWR :

- XLSmart merger value: \$6.5B – largest telco M&A in Southeast Asia
- Overlapping sites: 20–25% will be rationalized (not yet done because of long term leasing contracts)
- TOWR (Protelindo) exposure: ~32% revenue from XL/Smartfren

The value chain is divided into 3 layers: (1) Operators/MNOs, (2) Tower & fiber infrastructure providers, and (3) Suppliers & contractors.

This shrinking customer base at the core triggers the **decommissioning of redundant assets** and contract **renegotiations**, as 3 buyers now hold the negotiating leverage that was once divided among 5.

Capital expenditure (capex) from operators has become **highly selective**, prioritizing capability and efficiency over simple network expansion.

The FBB sector offers a strategic hedge against shrinking MNOs through direct exposure to millions of retail households.

- Market Landscape: IndiHome dominates (~67% share), leaving ample room for independent challengers like WIFI to capture underserved segments.
- Pricing Power: Unlike pure-play towers losing MNO leverage, FBB players hold strong pricing control by directly serving millions of retail households.
- Growth Runway: Indonesia's ~21% FBB penetration lags regional peers (~52%), offering a massive structural runway for long-term organic expansion.

FBB Penetration (SEA)

Layer 1: The Source of Demand – Mobile Network Operators (MNOs)

Demand & Pricing Pressure: Entirely dependent on Layer 2 CAPEX/OPEX. As tower companies delay expansions and slash maintenance costs, contractor revenues shrink in parallel, acting as the ultimate shock absorbers of the industry's consolidation.

M&A execution demands strict mitigation of OJK/KPPU thresholds, FX exposure, and related-party transaction (RPT).

Macroeconomic & Currency Dynamics

Infrastructure providers operate within a structural currency mismatch; their recurring lease revenues are entirely denominated in IDR, while network expansion and capital expenditures (CAPEX) rely heavily on USD.

This dynamic makes margins highly sensitive to currency fluctuations, necessitating rigorous FX management and hedging strategies to maintain financial stability.

Technological Evolution (Starlink & FWA)

The connectivity landscape is rapidly shifting due to the deployment of Low Earth Orbit (LEO) satellites (such as Starlink) and the expansion of Fixed Wireless Access (FWA), providing alternatives to traditional cellular towers.

To future-proof their business, infrastructure companies are accelerating their pivot toward Fixed-to-the-Home (FTTH) networks, securing the high-capacity, low-latency foundation that wireless alternatives cannot match.

Regulatory Moats - OJK & KPPU

Navigating OJK and KPPU frameworks is critical, as acquiring a public target triggers mandatory tender offers and stringent antitrust thresholds.

Mandatory Tender Offer (MTO): Acquiring a controlling stake in a listed target (WIFI) triggers an MTO to buy out minority shareholders, which significantly increases the deal's total capital requirement.

Thresholds & Timeline: Transactions exceeding Rp2.5T in combined assets or Rp5T in sales strictly mandate a post-merger notification within 30 working days.

Refloat Rule: The acquirer must sell back a portion of shares to the market if the MTO drops public liquidity below IDX minimum requirements.

Strategic Focus: The deal structure must actively prove that vertical integration into the fiber market does not create unfair barriers to entry.

The Related Party Transaction (RPT) Advantage: TOWR (Djarum) vs. WIFI (Hashim) carries significantly lower RPT risk compared to MTEL (Telkom)

Global precedents highlight that successful diversification requires new end-users, strict ROIC underwriting, and disciplined equity funding.

American Tower - Coresite

Detail	Data
Acquisition price	\$10.1B
CoreSite assets	25 data centers, ~288 MW capacity
Strategic rationale	Data center demand structural (cloud, AI, 5G edge)
Result (2026)	Maintained – AMT still expanding data center footprint

- **Transaction:** Diversified away from pure-play towers into the data center ecosystem.
- **Key Takeaway:** Targeted robust structural demand, maintained strict valuation discipline (avoided overpaying), and successfully integrated the asset into their broader digital infrastructure portfolio.
- **Lesson for TOWR:** Acquire adjacent infrastructure with structural demand, not just “growth story.” WIFI’s FBB = structural demand (penetrasi 21%→65%).

Crown Castle - Fiber / Small Cells

Detail	Data
Total Invested	>\$10B in fiber & small cell
Divestment (2025)	Sold fiber to EQT/Zayo for ~\$8.5B
Impairment	Significant write-downs
Why it failed	(1) Fiber economics ≠ tower economics, (2) Overpay, (3) Same anchor tenants (T-Mobile/Verizon), (4) Capex uncontrollable

- **Transaction:** Aggressively invested >US\$10B into fiber and small cell networks, but ultimately suffered a massive divestment at ~US\$8.5B, booking heavy impairments.
- **Fatal Flaws:** Misunderstood the difference between tower and fiber economics, allowed CAPEX to spiral out of control, and crucially, failed to diversify their revenue base by relying on the exact same MNO anchor tenants.
- Crown Castle built fiber from scratch in an already saturated market(US fiber penetration >80%). TOWR acquires WIFI who already has a customer base in a market that’s underpenetrated (21%). **Different playbook, different outcome.**

Global precedents highlight that successful diversification requires new end-users, strict ROIC underwriting, and disciplined equity funding.

CellNex Europe Rollup - Leverage Trap

Detail	Data
Strategy	Pan-European tower acquisition spree
Debt Level	Net debt/EBITDA >7x at peak
Result	Forced deleveraging, asset sales
Lesson	Leverage discipline matters – even for good assets

- **Transaction:** Executed a massive, debt-fueled tower roll-up strategy across Europe.
- **Key Takeaway:** Pushed the balance sheet beyond sustainable limits, forcing the company into a mandatory deleveraging phase just to protect its credit ratings.
- **Lesson for TOWR:** TOWR net debt/EBITDA ~3.7x = headroom exists. But deal structure has to protect debt rating (S&P BBB-, Fitch AAA idn).

Transferability to the Indonesian Market

While the global strategic playbook is transferable, Indonesia’s specific parameters differ significantly; the market features highly concentrated ownership, stricter OJK/MTO regulatory hurdles, and shallower capital markets.

Factor	Global (US/EU)	Indonesia	Implication for TOWR+WIFI
FBB Penetration	>80% (saturated)	21% > 65% (underpenetrated)	✔ Organic case much stronger
Market Structure	Mature, slow growth	Young population, data traffic exploding	✔ Growth runway 10+ years
Ownership	Dispersed (REITs, activists)	Concentrated (conglomerate)	✔ Can pursue long-term transformation
Regulation	Antitrust moderate	KPPU strict on horizontal merger	⚠ Vertical acquisition (WIFI) = only path
Capital Market	Deep, cheap debt	Shallower, but TOWR has IG rating	⚠ Must balance debt/equity; maintain rating
Competition	Fiber: intense (overbuilt)	Fiber: oligopolistic (IndiHome dominant)	⚠ WIFI must differentiate (FWA hybrid, rural)

TOWR's Main Problem

TOWR Can Only Capture a Part of Their Value

Value Chain Economics in Digital Connectivity

- TOWR monetizes infrastructure
- Mobile operators & ISP's monetizes access, subscriptions, customer relationships, and additional services

TOWR does not have a scale problem.
TOWR have a growth and capture problem.

TOWR Revenue is Highly Concentrated

- PT XLSmart Telecom Sejahtera Tbk (XLSmart Axiata)
- PT Indosat Ooredoo Hutchison Tbk (Indosat)
- PT Telekomunikasi Selular (Telkomsel)
- Others

What Does TOWR Need

The Missing Piece

Customer Access
Direct proximity to end user

Last-Mile Delivery
FWA & FTTH capability

Retail & Digital Engine
Subscription, billing service, customer care

Operational Scale
High-growth execution experience

Who Fits TOWR’s Need

Candidate	Business Model Fit	Growth Profile	Strategic Fit	Financial Health	Overall Score
WIFI	★★★★	★★★★	★★★★	★★★	★★★★
FiberStar	★★★	★★	★★★	★★	★★★
LINK	★	★★	★★	★★	★★
BALI	★★	★★	★★	★★	★★
MTEL	★★	★★	★	★★★★	★★
TBIG	★★	★★	★	★★★	★★
Others	★★	★★	★	★	★★

WIFI is the best fit for TOWR’s need

A High Growth Connectivity Player

TOWR + WIFI = Infrastructure Meets Access

Why Not Build or Partner? Why Acquire

Build

- High execution risk
- Years to scale
- Replicating capability
- Heavy capital before scale

Partner

- Limited upside for TOWR
- TOWR only gets rent fees
- WIFI captures growth and customers

Acquire

- Own the growth engine
- Capture full economic
- Faster scale
- Strategic control

TOWR Shareholder Structure

WIFI Shareholder Structure

Interpretation

TOWR trades at a steep discount to peers – 6.4x EV/EBITDA vs the 8.0x median, and well below TBIG (1 1.4x) or precedent M&A (9.4x median). This is the yield-compression penalty the market applies to tower assets in a consolidating MNO environment. WIFI trades close to the fiber-peer median at 10.5x, but its growth profile (58% revenue CAGR through 2030) argues for the upper quartile (22.5x). The two peer sets diverge on quality: tower peers compress on tenant risk, fiber peers re-rate on subscriber growth.

Metrics used (TOWR)

- **EV/EBITDA – Primary**
Industry standard for tower companies. EBITDA captures recurring lease cash flow cleanly, and tower opex is largely fixed, making it directly comparable across peers. TOWR at 6.4x vs peer median 8.0x is the core undervaluation argument.
- **EV/Tower – Secondary**
Bypasses D&A and capitalization differences. Values the physical asset directly. TOWR at ~Rp1.70bn/tower vs SUPR precedent Rp2.63bn – the gap reflects tenant concentration risk, not asset quality.
- **EV/Tenant – Cross-check**
Adjusts EV/Tower for tenancy ratio. A tower with two tenants is worth more than one. Useful for benchmarking utilization against MTEL and TBIG.

Metrics used (WIFI)

- **Forward EV/EBITDA – Primary**
TTM multiples are distorted by the FTTH/FWA build phase compressing near-term margins. Forward 2027F EV/EBITDA of ~4.8x (vs TTM 10.5x) is the value unlock argument.
- **EV/Homepass – Most strategically important**
Bypasses EBITDA distortions during the build phase entirely. Link Net precedent: Rp4.72mn/homepass. WIFI at current market implies ~Rp4,664/homepass – cheap, and improves as homepass scales beyond 5mn.

Return on invested capital	14%	9%	9%	8%
Gross margin for the tower leasing segment	77.4%	77.4%	73.4%	72.2%

TOWER's returns have declined consistently over six years. ROIC of 8% sits below WACC of ~9%. Adding capacity to the same asset class destroys shareholder value. Capital must be reallocated.

02 Inverting Customer Concentration Risk

Customer	Revenue FY2025	Ratio
PT XLSMART Telecom Sejahtera Tbk	Rp5,557.8 billion	42%
PT Indosat Tbk	Rp4,552.3 billion	34%
PT Telekomunikasi Seluler	Rp1,514.7 billion	11%
Total tiga pelanggan utama	Rp11,624.8 billion	87%

Risk

- 87.2% revenue from only 3 buyers
- Asymmetric renewals, weak bargaining power

Solution

Diversify to fragmented retail/enterprise base → revenue sensitivity to any single tenant falls permanently.

03 Structural Shift from Asset Ownership to Service Delivery

Indicator	Position	Layer Implication
Data consumption per connection	7.2 GB (2020) → 22 GB (2026F)	Raises need for capacity and access, not tower count
Fixed broadband penetration	Below 25% (Dec 2025)	Growth headroom is in the access layer
Fixed broadband technology mix	Fibre > 90%	Value shifting to transport and access
Wholesale colocation pipeline	>250 MW (Jakarta + Batam)	Edge and compute demand forming

Demand is growing, but TOWER is not capturing it. Tower-leasing segment grew just 2.4% in FY2025 – even as data traffic grew 3x. Edge-computing nodes are deployed to second-tier cities. Tower sites are natural locations – but value is only accessible to the Layer 4 owner.

HOW TRANSFORMATION IS ACHIEVED

04 Completing the Layer Architecture

Layer	TOWER Pre-Transaction	WIFI Contribution	Combined Entity
Passive Infrastructure	36,572 tower sites	-	Unchanged, higher utilization
Transport	~181,700 km fiber	Metro & access fiber	Backhaul internalized
Access	Limited to MWIFO & VSAT	FTTH + FWA	Nationally scaled access
Edge & Compute	None	Colocation & service nodes	Edge capacity at tower sites
Monetization	None	Customer base & advertising layer	Recurring end-customer revenue

A single tower generates up to four revenue streams. Fixed costs are already covered, so each incremental stream carries near-full margin.

05 Activating the Asset Base Through FWA

Dimension	Tower-Leasing Model	Service-Delivery Model (FWA)
Revenue driver	Number of corporate tenants & lease rates	Number of end customers & subscription rates
Number of buyers	3 national operators	Fragmented households & businesses
Link to data traffic	Indirect	Direct
Incremental margin per site	Capped by lease rates	High – fixed costs already covered
Growth ceiling	Available tenants	Household penetration within coverage area

Structural advantages of FWA:

- No last-mile fiber capex
- 30–50% lower FTTH opex
- Faster time-to-market
- Take-up rate 80–90%
- 36,572 sites with power & backhaul

06 Capital Reallocation & Platform Optionality

Component	TOWER	WIFI
ROIC	8% (FY2025)	18.2% (2026F)
EBITDA margin	82.0%	70.9%
Take-up rate	N/A	55–60%
Core gross margin	72.2% (tower)	80.4% (telecom)
Growth ceiling	Available tenants	Household penetration within coverage area

Capital reallocation from 8% to 18.2% ROIC is the immediate economic justification. The five-layer structure unlocks options – FWA expansion, edge compute, local ISP hosting, and asset recycling – that are not available under the two-layer model.

Gain & Benefit for TOWR and WIFI

Benefit for TOWR

TOWR's Constraint	WIFI's Contribution	Evidence
8% ROIC (below WACC)	18.2% ROIC platform	10.2% gap
2.4% core segment growth	241.6% telecom growth	Revenue Rp355B → Rp1,214B
72.2% core margin (declining)	80.4% telecom margin	8.2% gap
87.2% concentration in 3 tenants	Retail & enterprise base	Concentration falls to 77.6%
Passive tower leasing	5,000 FWA sites	36,572 towers activated
No edge or monetization layer	Colocation & end-customer relationships	Five-layer architecture formed

8

Benefit for WIFI

WIFI's Constraint	TOWR's Contribution	Evidence
Negative FCF of Rp4,090.7B	Operating cash flow of Rp7,574.2B	Internal funding capacity
Site needs for 5,000 FWA locations	36,572 permitted, powered sites	Site capex avoided
Reliance on third-party backhaul	~181,700 km fiber network	Network cost internalized
No access to corporate tenants	Relationships with 3 national operators	Wholesale channel opened
Limited field operations scale	Nationwide maintenance organization	Lower per-site visit costs
High per-site rollout cost	Shared infrastructure	Rollout cost cut by up to 30%

Value only emerges from the combination:

1. Economic activation of the tower base
2. Internalizing the vertical value chain
3. Dual monetization of a single asset
4. Structural shift in bargaining position

Position of the combined entity

Indicator	TOWR standalone	Combined pro-forma
Revenue	Rp13,327.9 billion	Rp14,987.3 billion
EBITDA	Rp10,924.1 billion	Rp12,030.3 billion
EBITDA margin	82.0%	80.3%
Weighted revenue growth	4.6%	20.4%
Revenue share from three tenants	87.2%	77.6%
Layers controlled	Two, fully	Five
Revenue streams per tower site	One	Up to four
Annual capital expenditure	Rp2,926.6 billion	Rp6,201.9 billion

The combined EBITDA margin falls by 1.7 percentage points, entirely attributable to the target's advertising segment, which carries a 33.9% gross margin. At the same time, weighted revenue growth rises from 4.6% to roughly 20.4%, and customer concentration falls by nearly ten percentage points.

1 FWA Activation of Tower Base

TOWR's 36,572 tower sites already have land, power, and permits—eliminating site capex and permitting delays. With fixed costs already covered and a take-up rate of 80–90% (vs 28% sector average), every new FWA customer delivers high incremental margin

2 Tower Fiberization

- Fibre-connected towers support higher lease rates
- Opens separate backhaul revenue stream
- Prepares sites for edge-compute deployment

3 Edge-Computing Capacity

- Colocation & interconnection revenue
- Internal backhaul cost reduction
- Valued separately as a real option

4 Neutral Hosting for Local ISPs

- Lease access & transport capacity to local ISPs
- Lowers customer acquisition cost; raises asset utilization

8 The Mix Shift Effect

The new revenue mix unlocks higher multiples:

- Growth: 4.6% → 20.4%
- Concentration risk: 87.2% → 77.6% (top 3 tenants)
- Asset monetization: 1 → up to 4 revenue streams per towe

7 Monetizing Customer Relationships

- WIFI's advertising layer (Rp445B revenue) operates over a larger customer base post-acquisition
- Revenue per customer rises without additional network capex
- Option to carve out if 33.9% gross margin drags on group mix

6 Cross-selling into the enterprise customer base

- TOWR's Rp4.6T enterprise/government base → channel for WIFI's managed services
- WIFI's enterprise base → target for TOWR's transport & colocation
- Two-way cross-sell opportunity

5 Cross-selling capacity to corporate tenants

- TOWR advantage: Direct relationships with all three operators → sales channel for WIFI's services
- WIFI standalone: No equivalent access to national operator procurement
- Realization factor: Moderate (depends on third-party decisions)

Cost Synergy

Overview

- Total run-rate synergy: Rp411.6bn/year at full realization, split across four buckets with tenancy uplift (44%) as the largest contributor.
- Realization ramp: 25% / 60% / 85% / 100% (Year 1–4), reflecting a conservative infrastructure integration timeline.
- PV of synergies: Rp3,144.5bn discounted at the acquirer WACC of 9.0%.
- After-tax full run-rate: ~Rp342bn/year (tax 17.3%). Cost-to-achieve of Rp520bn (Year 1–2) is fully absorbed by Year 3, from which net synergies turn structurally positive.

1. Tenancy / Co-location Uplift – Rp180.0bn (44% of total)

Driver	Detail
FWA sites on TOWER towers	5,000 sites × Rp3mn net/site/month × 12
Nature	Revenue synergy captured in-group at high incremental margin
Strategic relevance	Raises TOWER tenancy ratio; offsets MNO tenant losses post-consolidation

Key facts:

- WIFI targets 5,000 FWA sites by FY26F using TowerCo infrastructure
- TOWER’s implied tenancy revenue ~Rp12.1mn/site/month (3Q25); WIFI currently pays Rp7–10mn
- In-group, the net margin on this incremental tenancy is near 100% (no additional tower opex)
- This directly addresses TOWER’s core problem: tenant loss from MNO consolidation (XLSmart merger already caused churn)

2. SG&A Consolidation – Rp117.6bn (29% of total)

Driver	Detail
Basis	7% of combined SG&A (TOWER Rp1,211.6bn + WIFI Rp468.2bn = Rp1,679.8bn)
Sources	Duplicate corporate functions: finance, HR, legal, IR, public listing costs
Timeline	Year 1–2 (fastest to realize; no network dependency)

Key facts:

- TOWER SG&A/revenue: 9.1% (FY25)
- WIFI SG&A/revenue: 10.7% (FY26F)
- Post-merger, combined entity eliminates two sets of CFO/COO offices, two IR teams, two stock exchange compliance costs
- 7% is conservative vs. typical M&A playbook (10–15% SG&A synergy in infra consolidations)

3. Procurement & Backbone Integration – Rp30.0bn (7% of total)

Driver	Detail
Sources	Combined CPE/equipment purchasing + WIFI 10,000km fiber backbone integration
Mechanism	Volume discount on Nokia/Huawei/FiberHome procurement across combined entity
Conservative estimate	Kept at Rp30bn floor; upside if backbone monetized to 3rd parties

4. Financing Cost Reduction – Rp84.0bn (20% of total)

Driver	Detail
Basis	1.5% spread × WIFI gross debt Rp5,599.5bn
Mechanism	Refinance WIFI’s existing debt at TOWER’s lower cost of debt
TOWER implied rate	~6.8% (finance expense / gross debt)
WIFI implied rate	~5.1% (but incremental borrowing would be higher as standalone)

Key facts:

- WIFI raised Rp13.8tn in FY25 (BNI facility, rights issue, bonds, NTT stake) – cost structure as standalone ISP is structurally higher than an investment-grade TowerCo
- Under TOWER’s umbrella, future WIFI capex (FTTH/FWA rollout) can be funded at parent’s credit terms
- Annual interest saving = 1.5% × Rp5.6tn = Rp84bn
- This also reduces WIFI’s refinancing risk (WIFI bonds due ~2027–2028)

Synergy Ramp Schedule (Rp bn)

	Yr 1 (2026)	Yr 2 (2027)	Yr 3 (2028)	Yr 4 (2029)	Yr 5+ (2030)
Ramp %	25%	60%	85%	100%	100%
Pre-tax synergy	~103	~247	~350	~412	~412
× (1 – 17.3% tax) ≈ 83%	~86	~205	~291	~342	~342
Integration Cost	(260)	(260)	-	-	-
Net after-tax	(174)	(55)	+291	+342	+342

Net synergies turn positive from Year 3 (2028), consistent with the accretion timeline: Year 1 dilution is fully offset by ramping synergies plus target earnings compounding.

Financing Synergy

Leverage Profile (Rp bn)

A. LEVERAGE PROFILE ACROSS TENDER-ACCEPTANCE SCENARIOS					
	Standalone	Pro-forma 0% tender	Pro-forma 50% tender	Pro-forma 100% tender	Post-refloat
Net debt	44,509.6	48,583.6	51,845.5	55,107.4	45,107.4
EBITDA (+synergies post-refloat)	10,924.1	12,030.3	12,030.3	12,030.3	12,430.3
Net debt / EBITDA	4.07x	4.04x	4.31x	4.58x	3.63x
Interest expense	3,086.5	3,371.7	3,600.0	3,828.4	3,128.4
Interest coverage (EBITDA / interest)	3.54x	3.57x	3.34x	3.14x	3.97x
Debt / equity	167%	165%	165%	165%	165%
Debt / total assets	59%	52%	52%	52%	52%

- Leverage stays flat, not up. Combined EBITDA (Rp12,030bn) grows proportionally faster than new debt, so 0%-tender leverage improves marginally from 4.07x to 4.04x. The 40% equity portion structurally caps balance-sheet stress.
- Target self-funds the acquisition premium. WIFI's Rp1,106bn incremental EBITDA covers the Rp285bn annual interest cost on new acquisition debt by roughly 3.9x, meaning the deal strengthens EBITDA before any synergies are counted.
- Covenant headroom is comfortable. Interest coverage of 3.57x at 0%-tender sits 1.07x above the 2.50x floor, absorbing a 29.9% EBITDA decline before breach.
- Full-tender is the pressure valve, not the base case. 100% acceptance pushes interim leverage to 4.58x and coverage to 3.14x, still inside covenant. The refloat brings leverage back to 3.63x, below the standalone starting point.

Covenant Headroom

B. COVENANT HEADROOM	
Binding covenant: interest coverage (tightest in infra credit agreements)	
Pro-forma interest coverage (0% tender)	3.41x
Covenant floor	2.50x
Headroom vs covenant (x)	0.91x
EBITDA decline to breach covenant	27%
Full-tender interim coverage (pre-refloat)	2.84x
Post-refloat coverage	3.51x

- Key cushions:
- WIFI enters the deal with a net cash position of Rp565.2bn, partially offsetting the Rp4,074bn of new acquisition debt.
 - Combined EBITDA gains Rp1,106bn from WIFI consolidation before any synergies materialize.
 - Full run-rate synergies add another Rp412bn to EBITDA at steady state, improving long-run coverage to ~3.97x post-refloat.

Credit Rating Implications

Scenario	Assessment
Pro-forma 0% tender	Leverage -0.03x turn, coverage +0.03x; rating maintained
Full tender (100%)	Leverage peaks at 4.58x, coverage 3.14x; rating stable with refloat commitment
Post-refloat	Returns to 3.63x leverage, 3.97x coverage; strengthens credit profile vs standalone

- Rating-preservation actions:
1. Pre-brief rating agencies before deal announcement with refloat schedule
 2. Equity buffer: 40% stock consideration limits new debt vs. all-cash deal
 3. Refloat commitment: explicit timeline to restore public float and repay tender bridge
 4. Option: increase equity portion to 50%+ if agencies signal negative watch
 5. Covenant compliance: comfortable 27% EBITDA decline buffer at base case

Transaction Overview

Parameter	Terms
Acquirer	PT Sarana Menara Nusantara Tbk
Target	PT Solusi Sinergi Digital Tbk
Transaction object	51% controlling block of shares
Reference 100% equity value	Rp13,313.8bn at a 20% premium to market capitalization
Value of the controlling block	Rp6,790.1bn
Mandatory tender offer exposure	Rp6,523.8bn (49% × Rp13,313.8)
Form of consideration	60% Debt and 40% Equity
Target’s post-transaction status	Remains listed on the Indonesia Stock Exchange
Accounting treatment	Full consolidation with a 49% non-controlling interest

Deal Structure

The 60% debt / 40% equity structure minimizes earnings dilution by locking in the spread between post-tax debt cost (5.79%) and implied earnings yield on new equity (10.88%). The 40% equity portion serves as a covenant cushion, keeping interest coverage above 3.5x under the base scenario and preserving rating headroom.

Pre & Post Acquisition of Financial Statement

Item	TOWR standalone	Adjustment	Pro-forma
Revenue	Rp13,327.9 billion	Rp1,659.4 billion	Rp14,987.3 billion
EBITDA	Rp10,924.1 billion	Rp1,106.2 billion	Rp12,030.3 billion
PPA amortization	None	Rp(48.9)bn	Rp(48.9)bn
Consolidated net profit	Rp3,682.2 billion	Rp632.9 billion	Rp4,315.1 billion
Non-controlling interest	Rp110.9 billion	Rp4,173.8 billion	Rp4,284.7 billion
Total debt	Rp45,219.4 billion	Rp9,673.6bn	Rp54,893.0bn
Cash and equivalents	Rp709.9 billion	Rp6,164.7 billion	Rp6,874.6 billion

- Scale Expansion: Pro-forma combined revenue reaches Rp14,987.3bn, with EBITDA climbing to Rp12,030.3bn.
- Liquidity Surge: Cash and equivalents multiply nearly tenfold to Rp6,874.6bn.
- Contained Leverage: Total consolidated debt rises to Rp54,893bn, an increase of Rp9,674bn (WIFI existing debt Rp5,599bn + acquisition debt Rp4,074bn) fully absorbed by combined EBITDA.
- Shared Capex Burden: Annual capital expenditure doubles to Rp6,201.9bn, but 49% is absorbed by non-controlling interests.
- Accretive Profile: Consolidated net profit of Rp4,315.1bn drives pro-forma EPS to Rp49.65, delivering +5.1% accretion in Year 1 despite absorbing incremental interest, PPA amortization, and integration cost.

Accretion/Dilution Analysis

EPS Impact

TOWR Standalone EPS	Rp47.23
Pro-Forma Combined EPS	Rp49.65
EPS Impact	+5.12% (Accretive)

Funding Structure

- Acquisition Debt (60%): Rp4,074.0bn
- New Share Issuance (40%): Rp2,716.0bn
- TOWR Share Price Used: Rp434
- New Shares Issued: 6,258.1 mn shares

Cost of Capital Spread

- Effective Cost of Debt (Post-Tax): 5.79%
- Effective Cost of Equity (Earnings Yield): 10.65%

The transaction is +5.1% accretive in the first year on a standalone-consolidation basis, and delivers steady accretion thereafter as synergies ramp and WIFI’s earnings compound. On a fully-loaded basis (51% consolidation with PPA amortization, incremental interest, and integration cost), Year 1 shows -9.3% dilution absorbing all deal frictions upfront, then turns accretive from Year 2 (+2.2%) and reaches +27.9% by Year 4. The disciplined 60% debt weighting captures the full spread between cheap debt (5.79% post-tax) and expensive equity (10.88% earnings yield).

The infographic consists of two rounded rectangular boxes with dashed borders. The top box has a light blue background and contains the text '4,23x' in large blue font, followed by 'Net Debt/EBITDA' in smaller blue font. A horizontal line separates this from the bottom box, which has a white background and contains the text '2,82x' in large blue font, followed by 'Interest Coverage' in smaller blue font.

Metric	Value
Net Debt/EBITDA	4,23x
Interest Coverage	2,82x

Reference

Appendix

3. Overpayment/Valuation RISK (High)

WIFI trades at a premium to TOWR. Overpaying would compress returns and reduce downside buffer.

EV/EBITDA Multiple
(FY2025)

WIFI SOTP (PV)
Rp3.885
/share

Offer Price
Rp3.900
/share

Discount
~4%

4 FWA Execution Risk (High)

IRA (FWA) expansion is capital-intensive and execution-heavy. Under-delivery vs plan directly impacts growth and returns.

Key Risk

5. Leverage & Covenant Risk (High)

Different operating models (B2B infra vs consumer retail) create execution risk and culture friction.

Integration Complexity		Mitigation		Expected Outcome
1	Different operating models (828 vs B2C)	▶	36-month phased integration	
2	Customer acquisition, billing, field service	▶	Keep WIFI as a distinct business unit (Phase 1)	
3	Retail churn management	▶	Retain key WIFI management via equity / lock-up	
4	Network rollout & operations	▶	Integrate shared functions first, customer operations later	

6. Regulation Risk (Medium)

KPPU/Competition Risk

Change of control triggers mandatory notification within 30 working days.

- Pro-merger consultation
- Market overlap analysis
- Regulatory CP
- Prepare remedies early

OJK/Mandatory Tender Offer Risk

51% acquisition triggers MTO for remaining public shares.

- Ring-fence tender funding
- Include in Sources & Uses
- Maintain listing status
- Restore public float

Risk Legend

Finance For Indonesia

STATEMENT OF ORIGINALITY

Finance for Indonesia Case Competition 2026

The undersigned, acting as the Team Leader of a participating team in the Finance for Indonesia Competition 2026:

Full Name : Darell Matt Tanujaya
Team Name : Odyssey Capital
Email : darellmatttanujaya@gmail.com
Phone Number : 081519317017

Together with the following team members:

Name of Member 1 : Mishell Lorence
Name of Member 2 : Gloria Christophera Kusuma

Hereby declare in good faith that the work submitted to the Finance for Indonesia Case Competition 2026, consisting of the pitch deck (PowerPoint) and the supporting financial model (Excel):

1. Is the original work of the team members listed above, prepared independently without involvement from any external party;
2. Is free from any form of plagiarism, in whole or in part; all cited data, references, and sources have been properly attributed in accordance with applicable citation standards;
3. Has never been, and is not currently being, submitted to any other similar competition, whether at the national or international level;
4. Has not been previously published in any medium and does not infringe upon the intellectual property rights of any third party.

Should any indication or evidence of violation of this statement be found at any time, including plagiarism, data manipulation, external assistance, or multi-competition submission, our team is willing to accept the sanctions imposed by the committee, including but not limited to disqualification from the Finance for Indonesia Case Competition 2026, forfeiture of all prizes and certificates, and other consequences in accordance with the applicable competition rules.

This statement is made truthfully, without coercion from any party, and may be legally accounted for.

Jakarta, 26 August, 2026
Team Leader,

Darell Matt Tanujaya

Pro forma share count (000)	64.460.813	Buyer shares + new shares issued

M&A Financing Strategy

TOWR + WIFI Financing Strategy (Section 4)					
All figures Rp bn. Linked to Control / Merger-Model. 51% acquisition, 60% debt / 40% equity funding.					
Key assumptions					
Run-rate synergy (full, Rp bn)	400,0				
Min. interest-coverage covenant (x)	2,50x				
Bridge/acquisition debt rate	7%				
Refloat proceeds (Rp bn)	10.000,0				
A. LEVERAGE PROFILE ACROSS TENDER-ACCEPTANCE SCENARIOS					
	Standalone	Pro-forma 0% tender	Pro-forma 50% tender	Pro-forma 100% tender	Post-refloat
Net debt	44.509,6	48.583,6	51.845,5	55.107,4	45.107,4
EBITDA (+synergies post-refloat)	10.924,1	12.030,3	12.030,3	12.030,3	12.430,3
Net debt / EBITDA	4,07x	4,04x	4,31x	4,58x	3,63x
Interest expense	3.086,5	3.371,7	3.600,0	3.828,4	3.128,4
Interest coverage (EBITDA / interest)	3,54x	3,57x	3,34x	3,14x	3,97x
Debt / equity	167%	165%	165%	165%	165%
Debt / total assets	59%	52%	52%	52%	52%
B. COVENANT HEADROOM					
Binding covenant: interest coverage (tightest in infra credit agreements)					
Pro-forma interest coverage (0% tender)	3,57x				
Covenant floor	2,50x				
Headroom vs covenant (x)	1,07x				
EBITDA decline to breach covenant	30%				
Full-tender interim coverage (pre-refloat)	3,14x				
Post-refloat coverage	3,97x				
C. CREDIT-RATING IMPLICATIONS					
• Leverage rises only modestly (4.07x -> 4.23x) as the 40% equity portion limits new debt.					
• Interest coverage is the tightest metric; kept above the covenant floor under the base case.					
• Full-tender acceptance pushes interim leverage to ~5.07x -> refloat timetable is a rating commitment.					
• Rating-preservation actions: pre-brief agencies, publish refloat & deleveraging schedule, retain option to raise the equity portion if rating indications weaken.					
• Target's net-cash position (Rp565bn) and Rp1,106bn incremental EBITDA cushion the added debt.					

Return Analysis

TOWR + WIFI | Return Analysis (Section 5)

Rp bn. Acquirer cash flow = 51% of target FCF + after-tax synergies - integration. Discounted at WACC.

Bull		(7.950,6)	(748,3)	424,8	1.840,3	3.021,3	66.023,8	38.192,8	55,5%
Reconciliation note:									
• The value-creation bridge (Section B) is anchored to WIFI's MARKET equity (Rp17,252.8bn) and matches the casebook (~Rp9.3-9.6tn). The full-DCF NPV/IRR (Section A) uses OUR WIFI projections, which are more bullish than market, so base IRR (~30%) exceeds the casebook's 18.1%.									
• To reconcile to the casebook, lower the base Exit multiple (C49) toward 6x and/or FCF scalar (C48) - the Bear column already approximates the casebook's conservative case.

JAST	ISP mikro	Rp90 M	~0,4%	● Terlalu kecil

Suitable with Key Question and Casebook Problem

Not Suitable with Key Questions Requirement

Dimension	MTEL (Mitratel)	TBIG (Tower Bersama)	TOWR (Sarana Menara) 
 Market cap (2026)	~Rp35.4 T	~Rp30.5 T	~Rp21.6 T
 Towers	~39,593	23,892	~36,049
 Revenue 2025	~Rp9.5 T	~Rp6.9 T	~Rp13.3 T
 EBITDA 2025	~Rp7.8 T	~Rp5.9 T	~Rp10.9 T
 Net debt / EBITDA	~2.7x (strongest)	~5.0x (weakest)	~4.1x (manageable)
 Parent / control	Telkom (SOE)	Fully independent	Djarum Group
 Fiber / digital base	Moderate	Small (iForte)	Large — 253k km + DATA (51%)
 Case positioning	Most defensive	Most exposed	Most aggressive
 M&A track record	Limited	Limited	Proven (DATA, IBST, SUPR)
Verdict	Strong balance sheet, but captive to Telkomsel + SOE/RPT constraints — least independent freedom to reinvent	Most pressured to act, but weakest balance sheet — “most needs to, least able”	Motivated + capable + already on the path 

WHY TOWR IS THE CLIENT

- 

1 **THE TRANSFORMATION THESIS IS ALREADY ITS REAL STRATEGY.**

TOWR is the only one actively becoming a digital-infrastructure group (253k km fiber, 51% of DATA/Remala) — acquiring WIFI extends a path it has already committed to, not a leap into the unknown.
 - 

2 **STRONGEST ASSET COMPLEMENTARITY.**

Its national FTTT backbone is the "pipe" that WIFI's last-mile retail demand can fill — a genuine vertical-integration synergy neither MTEL nor TBIG can match.
 - 

3 **PROVEN INORGANIC CAPABILITY.**

TOWR has repeatedly executed acquisitions (DATA 40%→51%, IBST, SUPR go-private) — de-risking integration execution.
 - 

4 **INDEPENDENCE WITHOUT OVER-LEVERAGE.**

Unlike MTEL (captive to Telkomsel, SOE/related-party baggage), TOWR is free to reinvent itself; unlike TBIG (~5.0x leverage, tenant losses), its ~4.1x leverage still leaves capacity to fund a deal.
 - 

5 **HIGHEST STRATEGIC OPTIONALITY AND MOTIVATION**

to capture value across the whole chain — exactly what the case rewards.

In one line: MTEL has the firepower but not the freedom; TBIG has the urgency but not the balance sheet; **TOWR has both the motivation and the means** — and is already executing the thesis.

01 Yield Compression

Indicator	2020	2022	2024	2025
Gross profit margin	72%	74%	69%	69%
EBITDA margin	86%	85%	83%	82%
Operating margin	64%	64%	59%	59%
Return on Equity	30%	26%	19%	16%
Return on invested capital	14%	9%	9%	8%
Gross margin for the tower leasing segment	77.4%	77.4%	73.4%	72.2%

 TOWR's returns have **declined** consistently over six years. ROIC of 8% sits below WACC of ~9%. Adding capacity to the same asset class **destroys shareholder value**. Capital must be reallocated.

02 Inverting Customer Concentration Risk

Customer	Revenue FY2025	Ratio
PT XLSMART Telecom Sejahtera Tbk	Rp5,557.8 billion	42%
PT Indosat Tbk	Rp4,552.3 billion	34%
PT Telekomunikasi Seluler	Rp1,514.7 billion	11%
Total tiga pelanggan utama	Rp11,624.8 billion	87%

 **Risk**

- 87.2% revenue from only 3 buyers
- Asymmetric renewals, weak bargaining power

 **Solution**

Diversify to fragmented retail/enterprise base
→ revenue sensitivity to any single tenant falls permanently.

03 Structural Shift from A to B

Indicator	Value
Data consumption per connection	7.2 GB/day
Fixed broadband penetration	Below 10%
Fixed broadband technology mix	Fibre > 90%
Wholesale colocation pipeline	>250 M (Jakarta)

 Demand is growing, but TOWR's Tower-leasing segment grew 10% in 2024. Edge-computing nodes are driving demand for tower sites. Tower sites are natural locations for edge computing.

Indicator	2020	2022	2024	2025
Gross profit margin	72%	74%	69%	69%
EBITDA margin	86%	85%	83%	82%
Operating margin	64%	64%	59%	59%
Return on Equity	30%	26%	19%	16%
Return on invested capital	14%	9%	9%	8%
Gross margin for the tower leasing segment	77.4%	77.4%	73.4%	72.2%

 TOWER's returns have **declined** consistently over six years.
ROIC of 8% sits below WACC of ~9%.
Adding capacity to the same asset class **destroys shareholder value**. Capital must be reallocated.

Customer	Revenue FY2025	Ratio
PT XLSMART Telecom Sejahtera Tbk	Rp5,557.8 billion	42%
PT Indosat Tbk	Rp4,552.3 billion	34%
PT Telekomunikasi Seluler	Rp1,514.7 billion	11%
Total tiga pelanggan utama	Rp11,624.8 billion	87%

- 87.2% revenue from only 3 buyers
- Asymmetric renewals, weak bargaining power

Solution
Diversify to fragmented retail/enterprise base
→ revenue sensitivity to any single tenant falls permanently.

Indicator	Position	Layer Implication
Data consumption per connection	7.2 GB (2020) → 22 GB (2026F)	Raises need for capacity and access, not tower count
Fixed broadband penetration	Below 25% (Dec 2025)	Growth headroom is in the access layer
Fixed broadband technology mix	Fibre > 90%	Value shifting to transport and access
Wholesale colocation pipeline	>250 MW (Jakarta + Batam)	Edge and compute demand forming

Demand is growing, but TOWR is not capturing it.
Tower-leasing segment grew just 2.4% in FY2025 – even as data traffic grew 3x.
Edge-computing nodes are deployed to second-tier cities.
Tower sites are natural locations – but value is only accessible to the Layer 4 owner.

04 Completing the Layer Architecture

Layer	TOWR Pre-Transaction	WIFI Contribution	Combined Entity
 Passive Infrastructure	36,572 tower sites	–	Unchanged, higher utilization
 Transport	~181,700 km fiber	Metro & access fiber	Backhaul internalized
 Access	Limited to MWIFO & VSAT	FTTH + FWA	Nationally scaled access
 Edge & Compute	None	Colocation & service nodes	Edge capacity at tower sites
 Monetization	None	Customer base & advertising layer	Recurring end-customer revenue

 A single tower generates up to four revenue streams. Fixed costs are already covered, so each incremental stream carries near-full margin.

Dimension	Tower-Leasing Model	Service-Delivery Model (FWA)
Revenue driver	Number of corporate tenants & lease rates	Number of end customers & subscription rates
Number of buyers	3 national operators	Fragmented households & businesses
Link to data traffic	Indirect	Direct
Incremental margin per site	Capped by lease rates	High – fixed costs already covered
Growth ceiling	Available tenants	Household penetration within coverage area

No last-mile fiber capex	30–50% lower FTTH opex	Faster time-to-market	Take-up rate 80–90%	36,572 sites with power & backhaul
--------------------------	------------------------	-----------------------	---------------------	------------------------------------

Component	TOWR	WIFI
ROIC	8% (FY2025)	18.2% (2026F)
EBITDA margin	82.0%	70.9%
Take-up rate	N/A	55–60%
Core gross margin	72.2% (tower)	80.4% (telecom)
Growth ceiling	Available tenants	Household penetration within coverage area

Capital reallocation from 8% to 18.2% ROIC is the immediate economic justification. The five-layer structure unlocks options – FWA expansion, edge compute, local ISP hosting, and asset recycling – that are not available under the two-layer model.

Interpretation:

TOWR trades at a steep discount to peers – 6.4x EV/EBITDA vs the 8.0x median, and well below TBIG (11.4x) or precedent M&A (9.4x median). This is the yield-compression penalty the market applies to tower assets in a consolidating MNO environment. WIFI trades close to the fiber-peer median at 10.5x, but its growth profile (58% revenue CAGR through 2030) argues for the upper quartile (22.5x). The two peer sets diverge on quality: tower peers compress on tenant risk, fiber peers re-rate on subscriber growth.

Metrics used (TOWR)

- **EV/EBITDA – Primary**
Industry standard for tower companies. EBITDA captures recurring lease cash flow cleanly, and tower opex is largely fixed,making it directly comparable across peers. TOWR at 6.4x vs peer median 8.0x is the core undervaluation argument.
- **EV/Tower – Secondary**
Bypasses D&A and capitalization differences. Values the physical asset directly. TOWR at ~Rp1.70bn/tower vs SUPR precedent Rp2.63bn – the gap reflects tenant concentration risk, not asset quality.
- **EV/Tenant – Cross-check**
Adjusts EV/Tower for tenancy ratio. A tower with two tenants is worth more than one with one. Useful for benchmarking utilization against MTEL and TBIG.

Metrics used (WIFI)

- **Forward EV/EBITDA – Primary**
TTM multiples are distorted by the FTTH/FWA build phase compressing near-term margins. Forward 2027F EV/EBITDA of ~4.8x (vs TTM 10.5x) is the value unlock argument.
- **EV/Homepass – Most strategically important**
Bypasses EBITDA distortions during the build phase entirely. Link Net precedent: Rp4.72mn/homepass. WIFI at current market implies ~Rp4,664/homepass – cheap, and improves as homepass scales beyond 5mn.
